HA VAN DUNG

SOFTWARE DEVELOPER – .NET / FLUTTER / FULL-STACK

Ho Chi Minh City, Vietnam | +84 32 725 0461 | dungken2211@gmail.com
Portfolio | GitHub | LinkedIn

PROFESSIONAL SUMMARY

Software developer with approximately one year of professional experience delivering .NET 9 backend/full-stack features and production Flutter tablet workflows. Hands-on with REST APIs, SignalR, relational data, responsive interfaces, automated tests, and debugging across application and Android toolchain layers.

TECHNICAL SKILLS

Languages: C#, Dart, TypeScript/JavaScript, Python, Java 17, SQL
Backend: .NET 9, ASP.NET Core MVC/Web API, EF Core, CQRS/MediatR, FastAPI, Spring Boot, Node.js/Express
Mobile and web: Flutter 3.x, BLoC/Cubit, Provider, Dio, GetIt, React, Vue 3, Bootstrap, Tailwind CSS
Data and integration: SQL Server, PostgreSQL, MySQL, MongoDB, SQLite, REST, SignalR, Socket.IO, JWT/OAuth2/RBAC
Quality and tools: NUnit, Moq, FluentAssertions, Flutter analyze/test, Git, Docker Compose, Swagger/Postman

EXPERIENCE

Software Developer (.NET / Flutter)

Jan 2026 – Jul 2026

SST – Billiards Tournament and Club Management Platform

Full-time, Remote

Core stack: .NET 9, EF Core, SQL Server, CQRS/MediatR, Vue 3, Flutter, BLoC/Cubit, Dio, GetIt, SignalR, SQLite

- Delivered backend, web, and tablet features for tournaments, match scoring, table operations, club shifts, attendance, payroll, loyalty, and role-based workflows.
- Implemented .NET APIs and Vue interfaces for tournament setup, match/player selection, manual draws, single/double-elimination brackets, scheduling, PDF outputs, and live multi-table monitoring.
- Built Flutter tablet flows for tournament, match, and table selection; mapped API models into BLoC/Cubit state; and auto-filled Pool/three-cushion pre-match settings while preserving operator overrides.
- Integrated authenticated REST and SignalR actions for assignment/release, score synchronization, walkovers, undo, and bracket events; added reconnection/group rejoin and debounced score updates for unstable networks.
- Extended loyalty tracking across Pool, Carom, and Sport modes with SQLite phone migration, active-time calculation excluding pauses/warm-up, editable member data, warnings, and non-blocking end-game submission.
- Reduced duplicate multi-tablet operations through collision-resistant client IDs and backend idempotency; tested command/business flows with NUnit, Moq, and FluentAssertions and debugged Gradle/JNI/x86_64 packaging issues.

Freelance Full-stack Developer

Jul 2025 – Dec 2025

UEH Career Portal – University of Economics Ho Chi Minh City

Remote; senior-reviewed delivery

Core stack: .NET 9, ASP.NET Core MVC/Web API, EF Core, SQL Server, CQRS/MediatR, jQuery, Bootstrap

- Helped modernize candidate and administration portals from legacy .NET to .NET 9 while following the client's architecture, code-review process, and release constraints.
- Implemented recruitment workflows for job postings, candidate/company profiles, administration, and queued email notifications using CQRS/MediatR, FluentValidation, and AutoMapper.
- Worked with more than 60 SQL Server tables supporting 76,000+ candidates and 3,000 companies; handled migrations, compatibility, backups, and query-oriented debugging carefully.
- Coordinated APIs with jQuery/Bootstrap views and validated fixes across candidate/admin roles. Public references: candidate portal and admin portal.

PROJECTS

Explainable IT CV Intelligence and Career Assistant

Feb 2026 – Jul 2026

Individual graduation thesis – research and full-stack implementation

Core stack: Python 3.12, FastAPI, PostgreSQL/Neon, React 19, TypeScript, Recharts, Groq Llama 3.3 70B, BeautifulSoup, Docker Compose

Links: Live application | Source repository

- Implemented an eight-dimension CV freshness framework using AHP-derived weights and WSM scoring, producing experience-level-specific scores and transparent per-dimension explanations.
- Built multi-source JD crawlers with normalization, cross-source deduplication, scheduled ingestion, data-quality scoring, and a market dashboard exposing 33 skill/role/level/location metrics.
- Combined deterministic extraction and a bilingual skill ontology with grounded LLM fallback, covering 20+ entity types while retaining traceability to source CV/JD text.
- Implemented cascade matching, a seven-dimension CV–JD score, opportunity-window analysis, batch LLM ranking, multilingual Career Advisor, and ATS-oriented CV generation.
- Evaluated 40+ CVs across five roles and three levels; added OAuth2/JWT/RBAC and human review gates; deployed a modular FastAPI design using Docker Compose, Cloudflare Pages, and Render-compatible infrastructure.

VinCharge Subscription Platform
Mar 2025 – Jun 2025

Full-stack EV charging subscription and billing project

Core stack: Java 17, Spring Boot, Spring Security, PostgreSQL/Flyway, Flutter/Provider, VNPay, JWT, Cloudinary

Links: Source repository

- Built REST modules for JWT/BCrypt authentication, OTP recovery, contracts, subscription limits, consumption records, pricing, and transaction history; standardized validation, errors, migrations, and OpenAPI documentation.
- Integrated VNPay payment URL, signed return, server IPN, HMAC-SHA512 verification, transaction persistence, Cloudinary meter evidence, and SMTP notifications.
- Managed Flyway migrations and developed the Flutter app with Provider, REST/JWT sessions, localization, image/permission handling, QR-assisted payments, validation, and responsive layouts.

Speaking English with AI
Feb 2025 – May 2025

Flutter team project – four developers

Core stack: Flutter, Dart, Clean Architecture, BLoC, GetIt, Hive, SharedPreferences, MethodChannel, audio/transcription APIs

Links: Project source

- Developed scenario-based speaking practice with recording, transcription, and AI feedback on pronunciation, grammar, vocabulary, and fluency.
- Structured feature-first presentation/domain/data layers with BLoC, repositories, GetIt, reusable error mapping, persistence, and responsive portrait/landscape states.
- Coordinated recording/playback/result states and debugged Android media through MethodChannel and SurfaceView lifecycle handling, including buffer-queue recovery.

StuTrello Real-time Task Board
Jan 2025 – Apr 2025

Personal full-stack collaboration project

Core stack: React, Redux Toolkit, Material UI, Node.js/Express, MongoDB, Socket.IO, JWT, Joi, Cloudinary, Brevo

Links: Live application | Frontend | Backend

- Built board/column/card CRUD with `@dnd-kit` drag-and-drop, custom collision handling, cross-column persistence, and optimistic updates.
- Implemented access/refresh-token sessions, protected routes, membership/role checks, versioned Express APIs, Joi validation, and MongoDB aggregation for pagination/filtering.
- Added comments, members, cover uploads, Socket.IO notifications, and invitations backed by Brevo email while keeping optimistic Redux state consistent with persisted ordering.

Ontology-based Scientific Research Platform
2024 – 2025

Awarded research project for discrete-mathematics problem solving

Core stack: Java, Spring Boot, Spring Security, React 18, TypeScript, Bootstrap 5, MySQL, JWT, Quill/CKEditor

Links: Project materials

- Built an ontology-oriented knowledge base for discrete mathematics with theory, examples, articles, and discussions; implemented JWT Admin/Staff/User access, search/pagination, and rich-text editing.
- Connected typed React views to Spring Boot/MySQL APIs and supported research validation; the project received Third Prize in Student Scientific Research 2024–2025.

Coolmate E-commerce System
Academic project

Customer storefront, administration portal, and ASP.NET Core API

Core stack: ASP.NET Core, EF Core, SQL Server, React 18, TypeScript, Bootstrap, JWT/RBAC, Firebase/OAuth

Links: Repository collection

- Built responsive React customer/admin clients and ASP.NET Core/SQL Server APIs for catalog, cart, checkout, profiles, orders, inventory, dashboards, JWT authentication, and granular RBAC.

EDUCATION

Bachelor of Information Technology
2022 – Expected Aug 2026

University of Transport and Communications, Ho Chi Minh City *Requirements completed; diploma pending*

Graduation thesis focused on explainable multi-criteria assessment of IT CVs using AHP and WSM.

ACHIEVEMENTS

- **Third Prize, Student Scientific Research 2025–2026** – explainable AHP/WSM assessment for IT CVs.
- **Third Prize, Student Scientific Research 2024–2025** – ontology-based discrete-mathematics web system.
- **ICPC Central Vietnam 2024** – university team member; team solved four problems.

LANGUAGES

Vietnamese: Native | **English:** Technical reading/writing; improving speaking | **Japanese:** Took JLPT N3 Jul 2026 (result pending); preparing for N2 Dec 2026
